

FREE WORKSHOP

Irrigation Water Management for Growers

Wednesday March 14, 2018 (Date revised)

9 am – Noon

30 Mansfield Road

(San Benito County Water District)

Hollister, CA 95023

- Simple approaches to using climate (CIMIS) data
- How to display data in a user-friendly (graphical) format
- How to use soil water status graphs to help make irrigation decisions
- NRCS Financial Assistance to acquire and use tools
- Types of soil moisture sensors
- Meet monitoring equipment vendors and service providers

Root zone soil moisture should be managed to obtain optimum yields, and control deep percolation water losses. Good information helps irrigators determine the effectiveness of past irrigations and to draw conclusions for making future irrigation decisions.
